

Murad Raihan

Date of birth: 01/02/2001 | **Nationality:** Bangladeshi | **Phone number:** (+880) 1533694189 (Mobile) |

Email address: hassanmurad1501@gmail.com | **Website:** portfolio-hassan.onrender.com | **LinkedIn:**

[hassan-murad](#) | **Address:** Uttara, Sector-10, 1230, Dhaka, Bangladesh (Home)

ABOUT ME

"I work with Python, Django, Machine Learning, and automation to build scalable, production-ready systems. I enjoy developing REST APIs, backend services, and AI-driven solutions. I also have experience with React, Next.js, and React Native for frontend and mobile development."

SKILLS

Python | Django | AWS Cloud9 | Machine learning | FastApi | Selenium Automation | PyAutoGUI | Pytorch, Tensorflow | Desktop App Scraping (Pywinauto, Autoit) | Pandas | Numpy | Matplotlib | SQL | OpenCV | JavaScript | React Js | Next Js | Typscript | Git | GitHub

WORK EXPERIENCE

JUNIOR SOFTWARE ENGINEER – NAMESPACE IT – 05/11/2024 – Current – DHAKA, BANGLADESH

Email: nfo@namespaceit.com | **Website:** <https://namespaceit.com/>

Designed and developed Django-based RESTful APIs, integrated them with responsive React/Next.js frontends, and implemented robust web and desktop automation using Selenium and PyAutoGUI to enhance productivity and reduce manual operations.

SOFTWARE DEVELOPER INTERNSHIP – PIONEER ALPHA – 20/05/2024 – 20/09/2024 – DHAKA, BANGLADESH

Built a Django-based football league management software for ICFL, inspired by FIFA systems, enabling match scheduling, live score updates, team and player management, and detailed match event tracking with a structured and scalable backend.

PROJECTS

► Windows Estimates Automation Project

- **Fixed backend bugs** and implemented **new features** using **Python** and **Django**, enhancing functionality and performance.
- Built **automation scripts** with **Selenium** to streamline repetitive tasks and improve operational efficiency.
- Developed a desktop **automation application** using **PyAutoGUI** and **Flask** to simulate user interactions and automate manual workflows.

Language and Tools – Python, Django, Selenium, PyAutoGUI, Flask, AWS (EC2), Next.js, Git, VSCode.

Link <http://www.windowsestimates.com>

► Aionlinecourse Web Project

- Provides **online AI training** and practical **AI tools** to help individuals build **industry-relevant skills** in machine learning, data science, and automation.
- Offers **career guidance, coaching, and mentoring** to support **employability** and long-term **career growth**.
- Designed to be user-friendly, scalable, and continuously updated to match evolving tech trends.

Language and Tools – Next.js, React, GraphQL, Apollo Client, Tailwind CSS, Supabase, Vercel, GitHub, VSCode.

Link <https://www.aionlinecourse.com/>

► YouTube Summary Pro - Advanced Transcript Generation and AI Summarization

- Developed a **Django-based web application** for automatic YouTube video transcript generation and AI-powered summarization
- Implemented **multi-language support** and **timestamp precision** for accurate video transcription using yt-dlp
- Integrated **Google Gemini AI** for intelligent content summarization and key points extraction, delivering concise insights
- Built a **RESTful API** system with secure authentication, enabling developers to access transcription services programmatically
- Implemented efficient **task processing** for handling large-scale video processing requests

Language and Tools – Django, Python, Google Gemini 2.0, Tailwind CSS, JavaScript, MySQL, RESTful API

Link <https://youtubesummarypro.com/>

► AI Background Remover: Image Processing Web Application

- Built a Django web application that removes backgrounds from images using AI technology, handling up to 100 images at once.
- Created image processing features using OpenCV and backgroundremover library, supporting multiple formats like JPEG, PNG, and WebP.
- Added user tracking system that shows visitor statistics and their country locations using IP detection.
- Created API endpoints for easy access by other applications, with user authentication and security features.

Languages and Tools – Python, Django, OpenCV, backgroundremover, PostgreSQL, Tailwind CSS, JavaScript

Link <https://bgremoverfree.com/>

► PapersGraph – AI Research Paper Graph Visualization Platform

- Built a **FastAPI** application to interact with the **Qdrant vector database**, enabling efficient **similarity searches** and **document retrieval**.
- Implemented **endpoints** to upload **CSV/JSON files**, store documents as **vectors**, and perform similarity search queries with customizable filters.
- Developed functionality to retrieve **related documents** and **metadata** using **paper IDs**, returning structured **graph data**.
- Configured the system for flexible deployment using **environment variables** for **Qdrant connection settings**.

Languages and Tools – Python, FastAPI, Qdrant, LangChain, HuggingFace Transformers, AWS, Git, VSCode.

► Deep Learning Based Driver Drowsiness Detection & Alarming System

- Designed and implemented a deep learning-powered driver drowsiness detection system leveraging real-time facial landmark detection and eye-state classification.
- Optimised frame count control and temporal analysis to reduce false positives and improve detection accuracy in continuous video streams.
- Developed a real-time alerting system that activates audio alarms when drowsiness thresholds are exceeded, ensuring timely driver intervention.

Machine Learning / Deep Learning Requirements –

- CNN-based model for eye-state classification
- Real-time inference pipeline
- Frame count threshold logic
- Temporal analysis for continuous eye closure detection

Language and Tools – Python, Tensorflow, Keras, OpenCV, Dlib, NumPy, Pandas, SciPy, imutils, playsound, Haar Cascades, VSCode.

► Django Based E-commerce Website

- Developed a full-featured Django-based e-commerce platform with secure user authentication and role-based access control.
- Implemented product management, category filtering, search, and real-time inventory tracking.
- Integrated shopping cart, order management, and secure online payment gateway.
- Built an admin dashboard for order processing, user management, and sales analytics.

Language and Tools – Python, Django, HTML, CSS, Git, VSCode.

● EDUCATION AND TRAINING

01/01/2020 – 05/05/2025 Dhaka, Bangladesh

BACHELOR OF SCIENCE IN COMPUTER SCIENCE AND ENGINEERING IUBAT—International University of Business Agriculture and Technology

Website <https://iubat.edu> | **Final grade** : 3.17 / 4.00 | **Thesis** Deep Learning Based Driver Drowsiness Detection & Alarming System
